

How Safe and Secured is your Company's Data?

Safe and Secure Data | CompuBrain Certified Network | Computer Users' Code of Conduct | Website and Email Security | Data Backup System | Password Management System | Digital Signatures and SSL Certificates | Data Recovery System

Data is a critical entity of IT infrastructure implemented by any organization. Customer profiles, important figures and specifications, strategic deals, contracts and employee information all these data is very crucial and loosing of any of these data can prove fatal, if these data is created and stored electronically.

It happens often that the hard drives of your systems crash unexpectedly, due to Trojans or virus or sudden power shoot up due to motherboard malfunctions. This takes away all your critical data, stored emails, system files and all other electronic data that matters to you in one way or the other.

Data has to be made secured against theft, virus infection, crash and any other kind of accidental loss. CompuBrainTM helps its clients take care of their data by assessing the security of that valuable data and providing appropriate solutions for backup and securing of such critical data.
