Social networking and blogging are the most and IN TREND activities today. With features like uploading pictures for sharing with friends around the globe to and meeting someone special online along with changing status as per the user's mood have made it easy to stay in touch with friends and family. Associated with it is the risk of privacy and personal information being stolen for malicious purposes. Incidents of identity and picture thefts are on the rise and happening very often. There is a part that the users themselves need to play in order to help the sites prevent thefts from happening often.

Online shopping, the most popular and easy way of buying products from suppliers around the globe requires the buyers to enter sensitive and personal financial and Credit Card details over the websites and are visible and susceptible to attacks. Credit Card Fraud, illegal way of making money, is being discovered as the easiest way to make money by Cyber Crimes Prevention experts around the world. Hackers now attack websites which exchange financial and Credit Card Details with their users rather than government and institutional websites.

Through Web Phishing, perpetrators gather critical and sensitive personal information such as user ids, login passwords and credit card details by posing as a reliable and trustworthy entity in an electronic transaction means. Communications emanating from popular Social Networking web sites, Online Stores, Auction Sites, electronic payment facilitators or IT administrators are often used to fool and attract the E-ignorant Netizens.

Cyber Security Experts at CompuBrainTM helps its clients by providing all the necessary advice to protect and safeguard their information from being stolen. All the IT expertise gathered over the years by CompuBrainTM's experts is called into the service to protect our clients' interests. They ensure the type and extent of information exchanged, by our clients, on an E-Commerce website is done at a secured level and that the authenticity and security protocols of the websites are checked and verified beforehand. These experts also guides our clients to guard their interests and information against phishing by informing them about current legislation, providing training, creating awareness and deploying security

measures for the protection of clients' information.
