CMS stands for Content Management System. A CMS can be defined simply as an easy process which is used to manage the content of each and every pages of the web site. And the process is just few clicks. Within just few seconds your web pages would be updated. And you need no external help from anybody even if you don't have the knowledge of designing and development.

In simple words, Content Management System (CMS) is a boon for non-technical business people to easily maintain a website without any technological knowledge. To edit or manage the website content no HTML knowledge no programming skill is required. You can store a numerous data of your website. Multiple authors can post, edit or manage the content at a time with their respective login. You can provide them the limited permissions to forbid them from manipulating others work. You can work anytime from anywhere. You need the internet connection only with any computer you are working with. Just login to your account and you are ready to work.

CompuBrainTM can provide you with custom Content Management System solutions that are highly sophisticated in design and still very easy to use. The CMS comprises of various modules that we have built over the years like News Module, Events Module, Subscription Module, Picture Management Module, File Management Module etc. All our Content Management Solutions are completely customizable and can be tailor made to suit any specific requirement.
